

PRESS RELEASE

FOR IMMEDIATE RELEASE:

Gig Werks Receives New Business Intelligence Competency from Microsoft

October 2008, New York, NY – Gig Werks recently received the New Microsoft Business Intelligence Competency. The Microsoft Business Intelligence competency is designed to help demonstrate organization’s business intelligence expertise to customers and gives Gig Werks access to the training, tools, and resources needed in designing, deploying, and customizing business-intelligence solutions based on Microsoft technologies. Gig Werks has received this competency for its outstanding work in the area of BI, including two awards and highly trained professionals on staff.

Business Intelligence

Business Intelligence provides flexible and functional solutions that extend from the individual to the team to the entire organization. It accommodates the different needs of people in your organization and incorporates all the types of information; both structured and unstructured, people use to make decisions. These solutions include data warehousing, reporting and analysis, and performance management products and toolsets that can enhance productivity, foster confident decision making, reduce the complexity of organizing and distributing information, and improve your bottom line.

About Gig Werks

Gig Werks, is expert on the topic of business productivity infrastructure optimization. BPIO is a model and a methodology to guide companies to deploy IT as a coherent, connected solution, rather than as a reactive deployment of discrete products. This methodology serves to ensure maximum value and ease of use for end users while achieving the lowest total cost of ownership.
